Applicants intend to add the following claims:

30. A gaming system, comprising:

(A) at least one wagering device, the wagering device being adapted to allow a player
to play a game;

5 (B) a plurality of video displays;

(C) at least one controller in communication with the wagering device and the
plurality of video displays, the controller comprising a memory device for storing
at least a portion of a video presentation, the controller being adapted to
cause portions of a video presentation to be displayed on the plurality of video
10 displays, wherein the video presentation displayed on the plurality of video
displays appear integrated.

31. The gaming system of claim 30, wherein the controller is further adapted to detect a
bonus event from the wagering device, the controller is further adapted to cause the
plurality of video displays to display portions of a single video presentation upon the
15 detection of the bonus event.

32. The gaming system of claim 30, wherein the controller is further adapted to coordinate
presentation of the video presentation among the plurality of video displays.

33. The gaming system of claim 30, wherein at least one portion of the video presentation
displays the amount of a bonus award.

20 34. The gaming system of claim 34, wherein the controller is adapted to generate a random
number, the random number being adapted to determine the bonus award.

35. The gaming system of claim 30, wherein at least one portion of the video presentation
displayed on a first display displays at least one person engaged in a fishing activity, and

d. 38?

32. A gaming device adapted to allow a player to play a game, the gaming device comprising :
a plurality of video displays configured to be positioned in front of a player, the plurality
of video displays being adapted to display portions of a single video presentation, the
single video presentation being displayed on the plurality of video displays appearing
integrated, and the gaming device further comprising a controller in communication with
the plurality of video displays, the controller being adapted to generate a random game
outcome.

33. A method of operating a game of chance on a wagering device, the method comprising:

- (A) detecting game play signal initiating a game play on the wagering device;
- (B) providing a plurality of video displays in communication with the wagering
5 device; and
- (C) displaying portions of a single video presentation on the plurality of video
displays, wherein the video presentation displayed on the plurality of video
displays appear integrated.

34. The method of claim 33, further comprising detecting a bonus event, and performing step

10 C upon the detection of the bonus event.

Proposed Subjects for Discussion

For the telephonic interview scheduled on August 22, 2002, the applicant and his
attorneys would like to discuss:

- 15 1. Examiner's objections to the drawings
- 2. §112 rejection on claims 9-14
- 3. §112 rejection on claims 25-29
- 4. §102(b) rejection on claims 15, 16, 18, and 19 under Seelig et al. More particularly,
Seelig et al. does not teach displaying a portion of a video presentation on each of the
20 video displays in an integrated manner. While Seelig et al. discloses a racing element
displayed on a video display, each video display displays a complete and independent
presentation on each individual video display. While the racing element may be
displayed on a plurality of video displays, when a plurality of video displays are viewed
at the same time, a viewer does not see an integrated presentation.
